

ABSTRACT OF THE DISCLOSURE

An electronic device includes a housing that is formed with a recess for receiving an electronic card, and a groove extending from the recess. A pivot pin
5 is mounted in the groove. A cover is hooked on the pivot pin for covering the electronic card. The groove has a bight portion divided into first and second sections which are respectively spaced apart from the pivot pin by first and second gaps. A hook on the cover
10 has a width smaller than that of the first gap and greater than that of the second gap.
